

## Instructions for file upload

- Name the file to be uploaded as `sample.py`
- Import all the required cryptography packages for certificate generation.
- Import time package to compute delay and name the variables as `time1,time2,time3,time4` and use the syntax `var_name = process_time()`.
- Wrap the key generation code with variables `time1` and `time2` and certificate signature code with `time3` and `time4` variables.
